PHOTO INTELLIGENCE MEMORANDUM

RADAR ACCOMPANIED 85 mm AA BATTERY

25X1

Analysis of aerial photography dated [] indicates the presence of radar at a four gun heavy (85 mm) AA battery located at 359498, 3500 yards N. E. of the Nan-Tai Airfield. This radar was first noticed on [] photography.

25X1

The characteristics of the radar appeared to be a 25' - 30' arm rotating atop a 10' x 10' shed or box. The shadow did not reveal any disc-like or mattress type features. The site is located on low, level terrain and appears to be in operation. See the attached enclosure for a layout sketch of the site.

25X1. Consultation with [] of OSI, and [], was held and no definite conclusion as to type of set and function was reached. It is possible that this radar is a U. S. SCR - 268 set which is reported to be in the hands of the Chicoms. The SCR - 268 radar has gun laying as well as search capabilities.
